## Full Stack Developer

Hi! Glad to you for this opportunity to introduce my self and speak about my own skills, I'm Giuseppe Ferlazzo from Italy, a 30 years old nice and clever developer.
I started learning programming by my self when i losed my job in 2022, starting first HTML, then to styling with CSS, and then the logic thanks to Javascript. Years after, now in 2024, i know very well how to build high perfomance full stack applications using mainly Nextjs with Typescript, and the results are amazing.
I attempted and fullfilled a Master Blockchain with Digital Coach this year, certification which you can find at the last page of this curriculum. In the last page you can also see a list with many of my actual skills, tools and technologies i'm using right now.
I present my self as a good to code guy full stack developer, building apps both on web 2 and on web 3. My work expericence until now consists mainly in manual jobs, but by now i'm making websites as freelance with small but usefull projects, and that are also very gratificant for my self.
I send this curriculum to web agencies who will be glad to collaborate with and to build something special and usefull with.
I hope you could find in me the profile you are looking for, and do not hesitate to ask me by phone or email or trough social anything you doubt of or you are willing to know about me and my projects, which can be found in my portfolio website, link at the side.
